Breaking News:

SL Corp. Extends Data Grid Monitoring for Oracle Coherence

CORTE MADERA, Calif., Oct. 23 -- SL Corp., a leading provider of real-time monitoring, analytics and visualization software, today announced the availability of the Enterprise RTView for Oracle Coherence, a monitoring and management solution that provides users with visibility into grid status and effectiveness. Enterprise RTView for Oracle Coherence provides important validation when a grid infrastructure is performing correctly. More importantly, should any changes in the environment threaten the grid's performance or stability, it provides early warning of the potential issue, and facilitates troubleshooting to enable users to isolate and solve the problem quickly.

Many enterprises are adopting grid computing as the delivery platform for new applications, and as a cost-effective means for consolidating siloed infrastructures. They do so with the understanding that application performance and responsiveness depend heavily on the scalability of the grid environment.

Oracle Coherence, a component of Oracle Fusion Middleware, enables organizations to scale their grid-based applications by helping to eliminate barriers to the growth of their applications. It optimizes how applications access data by moving and managing data in-memory across the grid, closer to the applications that need it most.

While there are enormous benefits to an optimized grid infrastructure, two challenges remain. The first is understanding exactly what's happening at any given moment, with so many moving parts, to be sure that the grid is performing as expected. With numerous applications and nodes generating thousands of real-time data streams, it becomes extremely difficult to gain a horizontal view across the entire grid environment that is capable of providing early warning of issues that might prevent the grid from performing as expected. The second challenge is quickly troubleshooting and fixing potential threats to grid performance.

Enterprise RTView for Oracle Coherence helps users deliver increased visibility by aggregating and analyzing key performance metrics across the grid, and presenting the results through meaningful dashboards in real time as data is collected. The solution can also be easily customized to include additional data sources, different views and drill-down screens.

"It is truly impressive how easily Oracle Coherence handles such large volumes of data," said Tom Lubinski, founder, president and CEO of SL Corp. "We're pleased that our Enterprise RTView monitoring and visualization solution is able to provide Oracle Coherence users with that added confidence of knowing at all times that their grid is performing properly."

SL's data grid visibility solution is built using Enterprise RTView, a real-time monitoring and visualization platform for the easy creation and deployment of highly customizable analytics, dashboards, alerts and reports. It connects directly with data from Coherence and, optionally, almost any other enterprise data source. The combined solution enables users to visually monitor and create

dashboards and reports on the metrics that are important to them, and to make that information actionable for immediate response to exceptions.

Users are also able to persist real-time Oracle Coherence information to any relational database using the Enterprise RTView Historian. This allows users to analyze real-time grid status using historical context for more effective monitoring.

SL Corp. is a member of the Oracle Partner Network.

About SL Corp.

Over the past 24 years, SL Corp. has become the most knowledgeable and responsive provider of real-time monitoring, analytics and visualization solutions. SL's flagship product, Enterprise RTView, is the most customizable yet easy-to-use platform for providing meaningful visibility across operations to ensure issues are highlighted and addressed before they become costly problems. SL's exclusive focus on visualization solutions, commitment to customer success, and partner-centric culture are why thousands of industry leaders have chosen to work with SL to support their most critical applications and businesses. SL Corp. can be reached on the Web at <http://www.sl.com/>.
