SL Corporation Announces Latest Release of Enterprise RTView™

New features and enhancements in Version 3.0 improve functionality for web-enabled real-time enterprise dashboard solutions

Corte Madera, CA –September 28, 2003 – SL Corporation, a leading provider of software solutions for the monitoring and display of real-time information, today announced the latest release of SL-GMS Enterprise RTView, a solution that increases customer productivity by enhancing real-time business visibility with flexible enterprise displays and dashboards.

Enterprise RTView is an innovative, lightweight monitoring and display solution that can be easily integrated with multiple sources of data to create a web-enabled information system. Enterprise RTView provides a gateway to real-time enterprise information, enabling executives and business line managers to monitor business processes and allowing IT operations managers to increase the visibility of mission-critical business transactions. Enterprise RTView is easy to configure and can be deployed quickly in web browsers and enterprise portals, without programming.

New functionality included in the latest release (Version 3.0) includes:

1. Improved support for integration with relational databases, including enhancements to the XML Server for highly efficient scaling of Display Viewer clients
2. Significant performance improvements, including the zero-footprint Image Server option optimized for performance in a web browser or enterprise portal
3. Numerous graphic object enhancements, including improved graph trending capability.

About SL Corporation

For 20 years, SL Corporation has been a leading provider of software solutions for the monitoring and display of real-time information. SL's comprehensive range of solutions increases productivity by enhancing business visibility with monitoring solutions that provide a gateway to real-time enterprise operations data. SL also provides the SL-GMS Development Tools product line, which is used by leading companies in Process Control, Communications, Aerospace and Transportation to provide embedded high-performance graphic interfaces for their real-time applications.

SL products are licensed worldwide in over 60,000 mission-critical applications. Global customer implementations include ABB, Alcatel, CalTrans, Hewlett-Packard, and NASA (National Aeronautics and Space Administration). For additional information, contact
